Anjoman Performance & Activity Report (2025-05-28 → 2026-10-14)

Window 2025-05-28 → 2026-10-14 (1404/03/07 → 1405/07/22), five Telegram exports. Assembled from the analysis artifacts only: `timeline.json` (47 threads, 17 Jalali months, 47 mechanics), `ecosystem.json` (779 nodes / 881 edges), `classified.jsonl` (16,677 records; 12,066 in-window non-service), `classification_stats.json`, `threads.json`, and the source profiles consumed here (channel, summerschool_channel, ledger, docx). Figures render the Task-11 charts.

1. Executive summary

Across the analysis window the five Telegram exports carry **12,066 in-window, non-service messages** (of 16,677 parsed records; classification coverage 98% in-window).

Messages by chat (in-window, non-service):

Chat	Messages	Share
public_group	6,136	50.9%
private_group	5,309	44.0%
channel	426	3.5%
accounting_group	158	1.3%
summerschool_channel	37	0.3%

The three largest activity categories by label count are **meta_noise** (4,524), **community_social** (3,816) and **media_outreach** (1,929) of 14,818 total labelings (multi-label; see §7). The correlation stage tracks **47 threads** (46 message-bearing + 1 money-only), and the reconciled ledger behind them moves **139,787,000 toman receipts against 123,265,994 toman payments** (net **+16,521,006**, all 96 rows, including the 4,664,700 toman undated bucket).

Five headline threads by affiliated message count:

Thread	Title	First → last seen	Chats	Msgs	TX total (toman)
`intro-event-1405`	Intro Event 1405	2025-07-17 → 2026-10-09	5	752	56,185,000
`final-receipt-handover-1405`	تحویل نهایی اسناد مالی: جمع‌آوری عکس همه فاک…	2025-06-14 → 2026-10-12	5	413	—
`media-social-content`	تولید محتوا و سوشال مدیا (پوستر/پست/استات، …	2025-05-30 → 2026-10-10	5	385	—
`summer-school-1404`	Summer School 1404	2025-07-16 → 2026-10-02	5	231	46,942,900
`dept-weekly-seminars`	اطلاع‌رسانی سمینارهای هفتگی گروه‌های دانشکده…	2025-05-31 → 2026-10-12	3	208	—

2. Phase narrative

Thread first-seen dates and monthly activity split the window into four phases (Jalali months; the window opens 1404/03/07 = 2025-05-28). First-seen dates derive from affiliated messages, so they inherit the §7 affiliation caveat.

Window-opening stub: the partial month(s) 1404/03 carry 14 messages and the first-seen of 8 threads (largest: `final-receipt-handover-1405`, 413 messages); they precede the four phases below.

Summer 1404 (1404/04–1404/06)

Summer 1404 spans Jalali 1404/04–1404/06 with **1,962 messages** across the chats; the busiest surface is private_group (1,788 messages) and the dominant labels are meta_noise (872) and community_social (523). 30 threads first appear in this phase, led by `intro-event-1405` (first seen 2025-07-17 / 1404/04/26, 752 messages over 5 chats). The phase's peak month is 1404/04 (1,259 messages).

Thread	First seen	Jalali	Msgs	Chats	Last seen
intro-event-1405	2025-07-17	1404/04/26	752	5	2026-10-09
summer-school-1404	2025-07-16	1404/04/25	231	5	2026-10-02
astro-trips-observing	2025-07-17	1404/04/26	139	5	2026-10-10
sponsorship-room-renovation	2025-07-17	1404/04/26	123	3	2026-10-12
orientation-videos-2025	2025-07-12	1404/04/21	103	3	2026-10-08

Academic 1404-05 (1404/07–1405/03)

Academic 1404-05 spans Jalali 1404/07–1405/03 with **1,467 messages** across the chats; the busiest surface is private_group (1,181 messages) and the dominant labels are meta_noise (662) and community_social (420). 6 threads first appear in this phase, led by media-team-content-pipeline (first seen 2025-12-14 / 1404/09/23, 65 messages over 2 chats). The phase's peak month is 1405/03 (784 messages).

Thread	First seen	Jalali	Msgs	Chats	Last seen
media-team-content-pipeline	2025-12-14	1404/09/23	65	2	2026-10-09
elections-1405	2026-04-01	1405/01/12	61	3	2026-10-11
weekly-coordination-meeting-21h	2026-06-13	1405/03/23	14	2	2026-09-22

yalda-1404	2025-12-15	1404/09/24	9	3	2026-09-20

Summer 1405 (1405/04–1405/06)

Summer 1405 spans Jalali 1405/04–1405/06 with **7,747 messages** across the chats; the busiest surface is public_group (5,355 messages) and the dominant labels are meta_noise (2,645) and community_social (2,612). 2 threads first appear in this phase, led by intro-and-registration-videos (first seen 2026-09-14 / 1405/06/23, 126 messages over 1 chat). The phase's peak month is 1405/06 (5,638 messages).

Thread	First seen	Jalali	Msgs	Chats	Last seen
intro-and-registration-videos	2026-09-14	1405/06/23	126	1	2026-09-16
mic-failure-voice-loss	2026-06-29	1405/04/08	3	2	2026-09-23

Fall 1405 (1405/07–1405/07)

Fall 1405 spans Jalali 1405/07–1405/07 with **876 messages** across the chats; the busiest surface is public_group (781 messages) and the dominant labels are meta_noise (345) and community_social (258). No new threads first appear in this phase. The phase's peak month is 1405/07 (876 messages).

3. Activity categories

Monthly labelings per category, aggregated over chats (monthly_activity; a message with several labels counts once per label — 14,818 labelings over the 12,066 in-window messages).

1404 (columns are Jalali month MM)

publications_shabahng	122	0.8%	1405/06	2	`shabahang-journals-funding` (2)

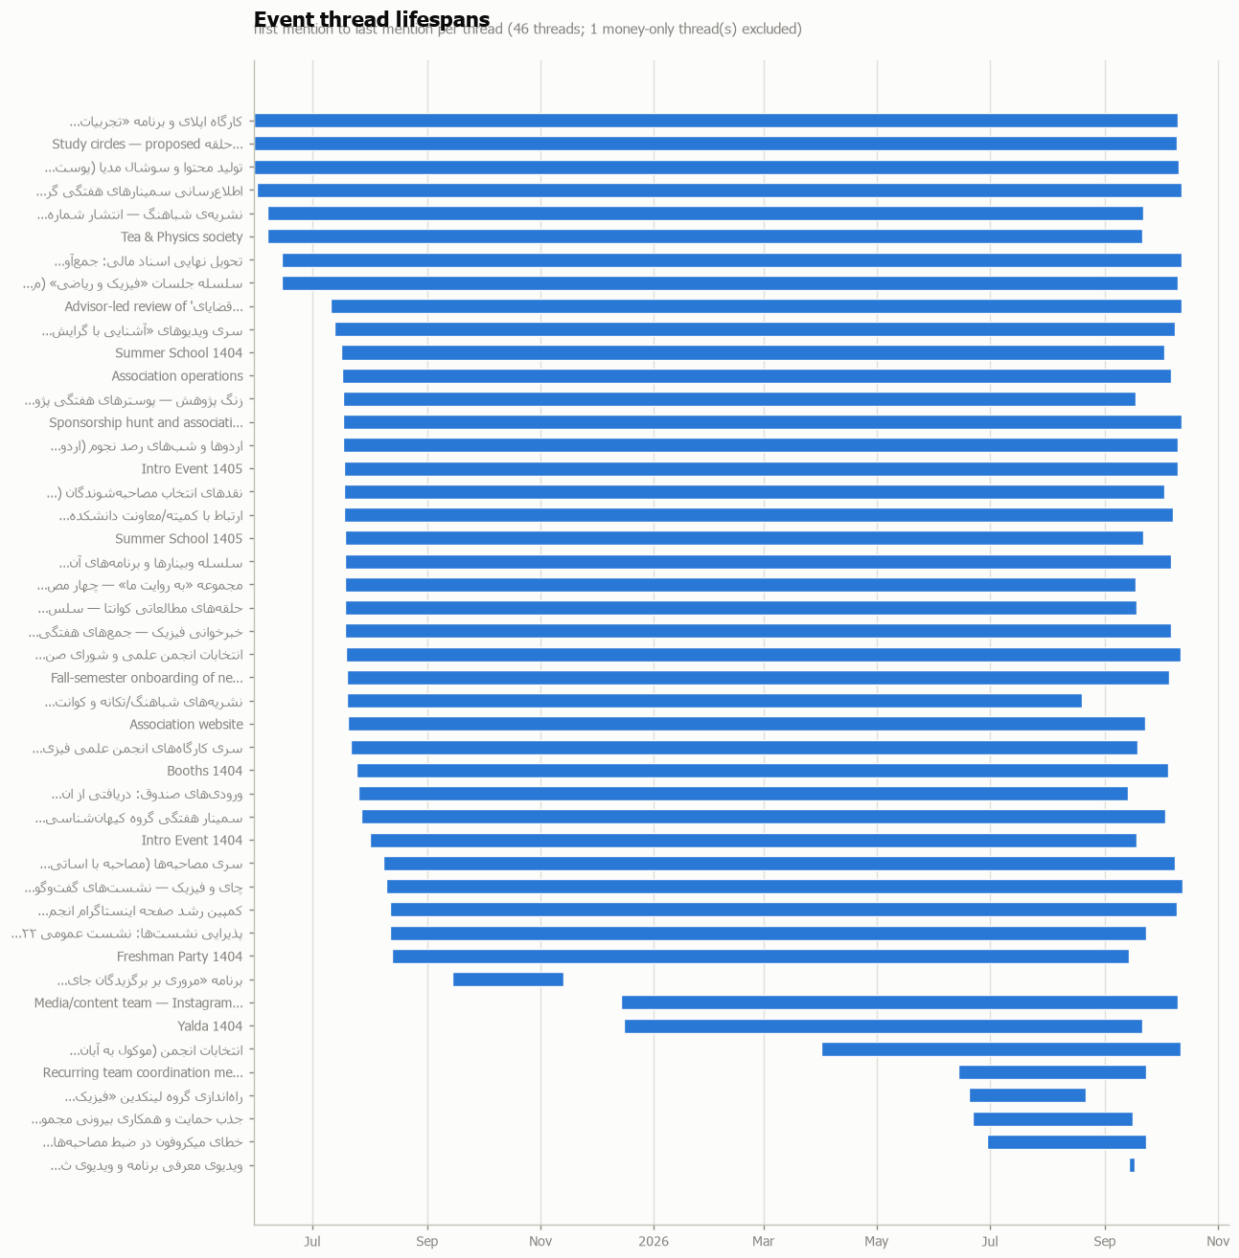

4. Cross-chat correlation

All 46 message-bearing threads with their per-chat spread, announcement lag and linked ledger money. `Explicit` counts messages whose LLM `event_ref` names the thread; the remainder of `Msgs` is keyword-fallback membership (2,734 of the 3,921 affiliations), so fallback-heavy threads carry approximate message counts and lags (§7). `Lag` = days from the earliest non-channel chat first to the channel first; negative means the channel announcement preceded other-chat coordination.

Thread	First seen	Chats	Msgs	Explicit	Lag (d)	TX total (toman)
`intro-event-1405`	2025-07-17	5	752	662	+0	56,185,000

Money without matched messages — coverage gap: `professors-assembly-mehr` (Professors assembly Mehr) carries 4 ledger rows (2,694,750 toman gross: 500,000 receipts, 2,194,750 payments; TX0019, TX0020, TX0024, TX0025) but zero keyword- or LLM-matched messages, so it is kept money-only with null first/last/lag. TX0025 is status *Duplicate* in the ledger, inflating the gross by its amount.

The three case studies below are the threads spanning the most chats (all five; tie-broken by linked transaction volume, then message count).

Case study: `intro-event-1405` **— Intro Event 1405**

752 affiliated messages across 5 chats, 2025-07-17 → 2026-10-09 (1404/04/26 → 1405/07/17); announcement lag **+0 days** (channel first 2025-07-17). Explicit affiliation: 662 of 752 messages (88.0%); the remaining 90 are keyword-fallback memberships.

Ledger money behind the thread: 56,185,000 toman gross across 4 transactions (50,235,000 receipts / 5,950,000 payments).

Stage	Date	Reference	Evidence

Payment — TX0012 (Payment)	1404/05	accounting_group#message47	300,000 toman · Teaching · Supported

The delivery surface is `private_group` — 200 of the thread's 231 messages between 2025-07-17 and 2026-08-27.

Case study: `final-receipt-handover-1405` — تحویل نهایی اسناد مالی: جمع‌آوری عکس همه فاکتورها/رسیدها و ق...

413 affiliated messages across 5 chats, 2025-06-14 → 2026-10-12 (1404/03/24 → 1405/07/20); announcement lag **-33 days** (channel first 2025-06-14). Explicit affiliation: 1 of 413 messages (0.2%); the remaining 412 are keyword-fallback memberships — this thread is fallback-heavy, so its message count and lag are approximate (§7).

No ledger transactions link to this thread (it is the receipt-collection workstream itself, not a spending project).

Stage	Date	Reference	Evidence
Planning — earliest explicit affiliation	2026-06-27T15:36	accounting_group#message137	و اینکه باران فردا عصر و پس‌فردا عصر ای حتی 3شنبه عصر تایم های خالیت ور ...
Announcement — first channel post (43 msgs)	2025-06-14T12:00	*(chat first, keyword-matched)*	first message in this chat
Delivery — busiest chat private_group (194 msgs)	2025-07-18T00:54	*(chat first, keyword-matched)*	first message in this chat
Work — first message in summerschool_channel (2 msgs)	2025-07-18T16:41	*(chat first, keyword-matched)*	first message in this chat
Work — first message in accounting_group (10 msgs)	2025-07-25T15:53	*(chat first, keyword-matched)*	chat first 2025-07-25; earliest explicit accounting_group#message137 2026-06-27
Work — first message in public_group (164 msgs)	2026-08-12T15:42	*(chat first, keyword-matched)*	first message in this chat

The delivery surface is `private_group` — 194 of the thread's 413 messages between 2025-07-18 and 2026-10-06.

5. Ecosystem map

`ecosystem.json` carries **779 nodes / 881 edges** (8 seed entities, 5 chat exports, 766 externals). Seed validation (an edge weight ≥ 3 into the seed evidences it):

Seed	Label	Status	Forward weight in	Mention weight in
association	انجمن علمی فیزیک شریف	evidenced	48	1,868
physics_tea	چای فیزیک (@physics_tea_sessions)	evidenced	22	—
tea_chat	چای - حضوری	unverified	—	—
shabahang_sut	نشریه شباهنگ (@shabahang_sut)	evidenced	32	33
sharifastronomy	گروه نجوم شریف (@sharifastronomy)	evidenced	51	52
takaneh	نشریه تکانه (@takaneh_physics_sharif)	evidenced	23	—
sutschools	مدرسه تابستانی فیزیک (@sutschools)	evidenced	16	61
quantasc	حلقه‌های کوانتا (@QuantaSC)	evidenced	184	252

Unverified seed caveat: `tea_chat` = چای - حضوری has zero forward and mention edges in the exports — an in-person gathering with no digital footprint, so every graph statement in this report is made over the 7 evidenced seeds only.

Top external origins by forward weight (forwards into the five chats; 1,273 total forward weight):

#	External origin	Forward weight	Share of forwards	
1	انجمن علمی ژرفا	61	4.8%	
2	Deleted Account	45	3.5%	
3	خبرخوانی فیزیک	42	3.3%	
4	اطلاع‌رسانی فعالیت‌های پژوهشی دانشکده‌ی فیزیک	37	2.9%	
5	Saman Moghimi	36	2.8%	
6	Alireza Jafari	26	2.0%	
7	Za.Am	24	1.9%	
8	Quantum Information Science @ Sharif University of Technology	23	1.8%	
9	روزنامه شریف	SharifDaily	20	1.6%
10	مرکز پژوهشی فیزیک انرژی بالا	19	1.5%	

The association operates as a relay. Its channel is both a megaphone and a redistribution point: the association handle anchors **1,868 mention weight** onto the association seed (post alias merge; 1,793 of them the channel's own post-signature handle), it has relayed the department's weekly seminar digests since 2018 — **597 all-time channel posts** (anchors 2018-04-14 → 2025-04-24, outside the analysis window) — and **کوانتا (QuantaSC study circles) takes 22.5% of the channel's forward weight** (184 of 816), on top of 252 mention weight. The strongest subgroup partnership in the graph is thus the association's own spin-off study-circle network.

Docx media report — verbatim metrics (quoted with period labels)

[redacted] — 55 paragraphs / 25 table rows; periods covered: شهریور ۱۴۰۵; مهر ۱۴۰۵; ۱۲ سپتامبر تا ۱۱ اکتبر (۳۰ روز) = ۱۴۰۵/۰۶/۲۱ تا ۱۴۰۵/۰۷/۱۹. All 38 metrics verbatim:

Metric	Label	Verbatim	Value	Period

m38	پنجره فیلم‌برداری و تولید فشرده مجتوا	حدود یک هفته پیش از رویداد ... در یک هفته فشرده	1	پیش از رویداد معرفی رشته فیزیک

The document's own caveats (claims, quoted):

- رشد دنبال‌کنندگان و توزیع مجتوا نشان داد مجتوای علمی-دانشگاهی با روایت انسانی هم با هویت دانشکده سازگار است و هم جذاب (para-25).
- ۸۹٫۸٪ بازدیدها از غیردنبال‌کنندگان بود؛ درصدها سهم بازدید هستند نه افراد یکتا (para-17).
- بدون داده‌های ثبت‌نام نمی‌توان سهم مستقیم هر ویدیو در تصمیم مخاطبان را محاسبه کرد (para-27, para-45).
- در صفحات دانشگاه‌های دیگر مجتواهایی با ساختار مشابه دیده شد؛ الگوبرداری قطعی اثبات‌شدنی نیست (para-33).
- نظرسنجی ساختاریافته رضایت در دست نیست، بنابراین درصد رضایت قابل گزارش نیست (para-35).
- دعوت از دانشجویان زن برای مصاحبه انجام شد اما موافقت نشد؛ مصاحبه‌ای با حضور آنان منتشر نشد (para-41).

- پیش‌نهادهای تیم: آغاز زودتر پیش‌تولید، ثبت منظم آمار مستقل هر محتوا، کنترل تجهیزات صوتی، نگهداری فایل پشتیبان (para-47).

No toman amounts appear anywhere in the docx report — its only cost accounting is the 34–38 production-hour estimate (m29), so the financial side of the same campaign rests entirely on the ledger artifacts of §4.

6. Monthly × hourly patterns (university mechanics)

`mechanics` lists 47 recurring patterns (10 fixed event slots, 28 weekday peaks, 9 ledger-linked hours; n ≥ 5 only).

Fixed event slots

Thread	Mode start	HH:MM mentions	Distinct times	Deadline-style times
`apply-workshop`	15:00	64	16	1 (00:00)
`dept-weekly-seminars`	13:30	62	38	1 (00:00)
`calculus-study-circle`	20:00	33	9	0
`media-social-content`	18:00	24	8	0
`astro-trips-observing`	14:00	23	12	1 (23:59)

Thread	Mode start	HH:MM mentions	Distinct times	Deadline-style times
`cosmology-weekly-seminar`	17:00	18	9	0
`association-website`	13:00	13	6	1 (23:59)
`physics-math-circle`	20:15	10	7	0
`research-bell-photos`	08:00	10	8	0
`final-receipt-handover-1405`	18:00	5	2	0

Caveats (inherited from the extraction rules): the mention count n includes **deadline-style times** (00:00 / 23:59 appear in several threads' `times` lists), so a mode is far more reliable than its n; and colloquial hour-only mentions such as «ساعت ۳» (old-style 15:00) are **never collected** — only literal HH:MM strings are, so evening events advertised colloquially are under-represented here.

Weekday peaks (per chat)

Chat	Weekday	Peak hour	Messages
accounting_group	شنبه	18:00	23
accounting_group	یکشنبه	23:00	5
accounting_group	دوشنبه	15:00	5
accounting_group	سه‌شنبه	22:00	17
accounting_group	پنجشنبه	20:00	20
accounting_group	جمعه	04:00	7
channel	شنبه	13:00	10
channel	یکشنبه	15:00	12
channel	دوشنبه	17:00	8
channel	سه‌شنبه	10:00	7
channel	چهارشنبه	19:00	6
channel	پنجشنبه	16:00	11
channel	جمعه	21:00	9
private_group	شنبه	23:00	134
private_group	یکشنبه	19:00	142
private_group	دوشنبه	12:00	124
private_group	سه‌شنبه	23:00	146
private_group	چهارشنبه	11:00	116
private_group	پنجشنبه	13:00	125
private_group	جمعه	23:00	136
public_group	شنبه	23:00	75
public_group	یکشنبه	13:00	230
public_group	دوشنبه	00:00	338
public_group	سه‌شنبه	00:00	142
public_group	چهارشنبه	00:00	215
public_group	پنجشنبه	01:00	165
public_group	جمعه	23:00	135
summerschool_channel	سه‌شنبه	22:00	5

Ledger-linked accounting hours

Hour	TX-linked accounting_group messages
04:00	5
11:00	7
13:00	8

Hour	TX-linked accounting_group messages
14:00	5
15:00	5
18:00	24
20:00	8
21:00	5
22:00	9

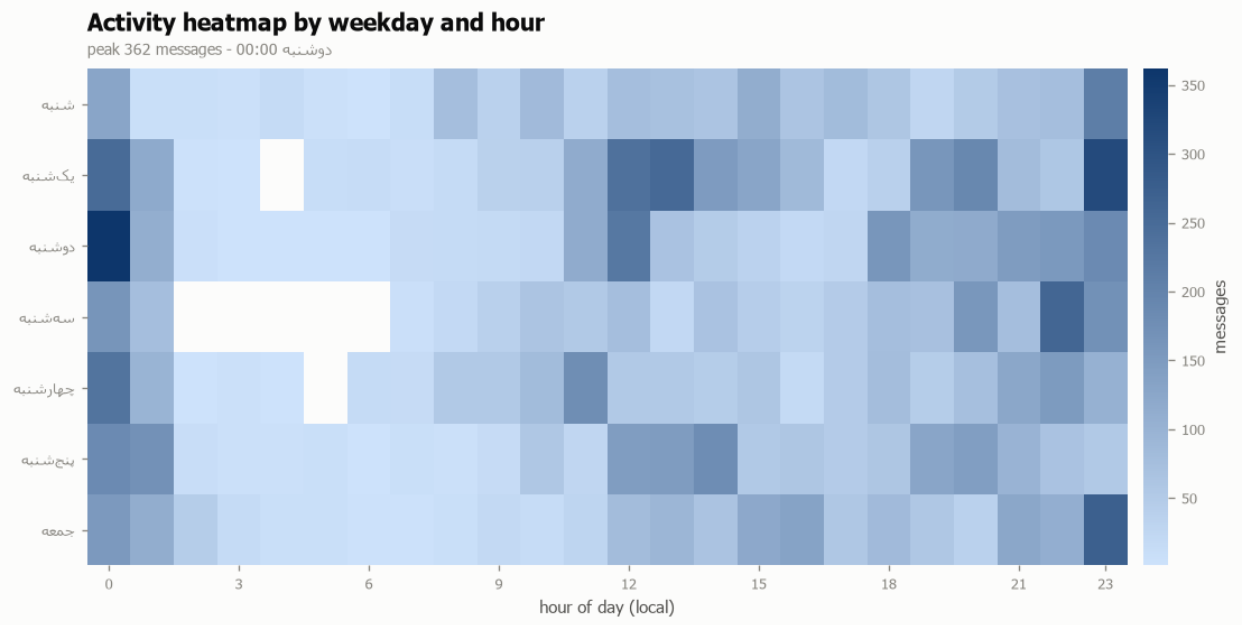

The 04:00 entry (n = 5) sits right at the n ≥ 5 threshold and reflects night-time bookkeeping posts — observational, not a scheduled mechanism.

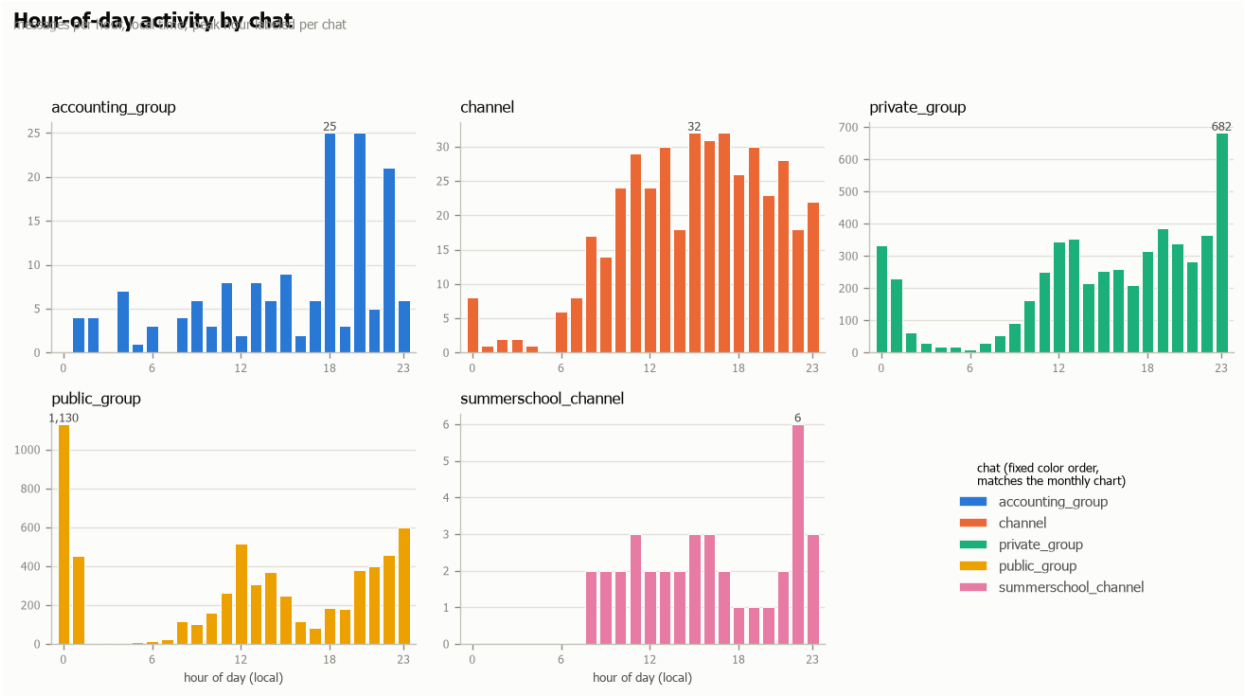

Nocturnal coordination

The single strongest hourly signal in the corpus is late-night coordination: the private group's busiest hour is **23:00 with 682 messages** and the public group's is **00:00 with 1,130 messages** (its 23:00 follows at 598). Between 22:00 and 01:00 the private group posts 30.4% of its volume and the public group 43.1% — student-run coordination happens after midnight, not in the 13:00–19:00 business band the fixed slots occupy.

Summer-school channel mechanics

The dedicated summer-school channel (37 in-window posts) runs its live sessions at a fixed class hour — **18:00–19:10** («18:00 الی 19:10» in the 1405 course calendar; event-hour 18:00 appears in 8 posts, «همه‌روزه») — and publishes its announcements in a **Saturday slot**: 11 of 37 posts sit in the شنبه weekday-slot peak.

7. Classification method & limitations

Three-layer pipeline over the 16,677 parsed records; the analysis denominator is the **12,066 in-window, non-service messages**:

Layer	Method	Messages (in-window)	Share
1	structural rules (poll/forms/media-only)	836	6.9%
2	lexicon (multi-label, 323 entries)	4,818	39.9%
3	LLM residual (method=llm)	6,158	51.0%
	classified total	**11,812**	**97.9%**

Layer-2 coverage plateaued at 46.86% raw / 21.18% topical — 5,654 of 12,066 messages received at least one lexicon/rule label, but only **2,555 carry at least one topical category** (anything beyond the chatter pair meta_noise/community_social); the remaining **3,099 layer-2 labelings are classified-only-chatter**. The structural ceiling is visible in the data itself: 594 in-window messages have no text and no media to classify, 311 are voice-only with no text, and 2,661 of the layer-3 messages are 15 characters or shorter — so the residue was routed to layer 3 rather than forced into topics.

Final state: 97.89% classified. The LLM layer labeled **6,158 messages with** `method=llm` (confidence-gated at 0.7); after the Task-14 precision pass (risky-word corroboration plus lexicon pruning), **254 in-window messages** hold no label rather than a speculative one, and 2,512 records remain unlabeled corpus-wide. **40 messages** carry `is_decision` (all from the LLM layer).

event_ref is affiliation, not evidence. The LLM attached explicit `event_ref` labels to **1,186 messages**, and the correlation stage added **2,734 keyword-fallback memberships** (first-6-keyword substring match) to reach 3,920 affiliated messages across the 46 message-bearing threads. In fallback-heavy threads — e.g. `final-receipt-handover-1405` (1 explicit of 413) — the per-thread `n_messages` and `announcement_lag_days` are therefore approximate, and §4 marks them as such.

Further limitations. meta_noise is the largest category (4,642 of 18,927 corpus labelings) — the groups are, by volume, mostly chat. Labels are multi-label (capped at 4): 1,921 of 12,066 in-window messages carry more than one category, so category sums exceed message counts (18,927 corpus labelings over 16,677 records). Service messages (joins, title changes, poll closes) are excluded from every narrative and histogram here. Timestamps are export-local (UTC+03:30) — hour patterns are Tehran-local.
